Buccal Tubes

(IMD)

Maxillary

\$0.99 each

Buccal tubes are manufactured with injection molding. MIM technology allows us to design smooth contours. The bonding

bases are anatomically designed and contoured for positive bond adaptation to molars.

NEW GLASS IONOMER ORTHO ADHESIVES

GC Fuji ORTHO™ LC Automix (bracket adhesive) GC Fuji ORTHO™ BAND LC Automix

Light-Cured Resin-Modified
Glass Ionomer Adhesives For
Orthodontic Brackets and Bands

New automix system and wet
field compatibility makes it faster
& easier for you. Sustained
fluoride release prevents white
spot formations & makes it better
for your patients.

GC Fuji ORTHO™ LC adhesives chemically bond to tooth structure with mild conditioning
without damaging enamel.

Phosphoric etch step with resins damage and demineralize enamel upon placement.

The difference between conditioning and etching is clear.

- LSM (Confocal laser scanning microscope) observation - Bovine enamel: 2400-grit polishing

GC ORTHO Gel Conditioner (10 Sec. treatment)
GC ORTHO Gel Conditioner prepares tooth
structure for adhesive - without enamel loss.

Scottsbond Etchant™ (30 Sec. treatment)
When phosphoric acid is applied,
10 micrometers of enamel are lost.

GC Fuji ORTHO LC adhesive maintains bond strength and enamel.

Case shown immediately after debanding
brackets with GC Fuji ORTHO LC. Sustained
fluoride release helps protect enamel.

Case shown immediately after debanding
brackets bonded with resin cement. Insufficient
fluoride protection to prevent white spot lesions.
